

SHIPPENSBURG PUMP CO., INC.

SHIPCO®
PUMPS

*Are you having pump
cavitation problems?*

*Are your mechanical seals
wearing out prematurely due to
condensate temperatures that
exceed your pump's ability to
handle **HOT** condensate?*

*Does your pump sound like
it is trying to pump marbles?*

SHIPCO® "P" style pumps allow you to have a 2 ft. NPSH pump operating at the best specific speed, 3500 RPM, and the best efficiency point on the pump curve. This pump also utilizes a modern, efficient 3500 RPM motor.

Utilizing an adapter flange we can retrofit this pump to fit onto **your** receiver. Most models of the "P" style pump are also available in horizontal close-coupled or flex-coupled format if desired.

SHIPCO® utilizes industry standard motors.

Contact your local **SHIPCO®** representative for additional information or sizing assistance.
